-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Marhofer or Jockers or Rotaru et al in view of Middleton et al. Marhofer, Jockers and Rotaru et al all disclose the production of hydroxylammonium salts by reacting nitrous oxide with hydrogen in an acidic medium with agitation. (See col. 1, lines 47-61 of Marhofer; Example 1 of Jockers; and the Abstract and col. 1, lines 11-50 of Rotaru.) The difference between the processes disclosed by Marhofer, Jockers and Rotaru et al, and that recited in applicants' claims, is that Marhofer, Jockers and Rotaru et al do not disclose that the agitation should be performed by a disk agitator and a two-blade agitator. Middleton et al establish that disc agitators and blade agitators are conventional in the art of mixing gases and liquids. (See col. 1, line 8 through col. 3, line 50.) It would be obvious from Middleton et al to conduct the agitation in the process of Marhofer, Jockers or Rotaru et al with a disk agitator and a two-blade agitator, since one of ordinary skill in the art would appreciate that the agitation in the process of Marhofer, Jockers or Rotaru et al could be conducted in any known or suitable manner which would include the two-blade agitator and disk agitator of Middleton. The recited locations in claim 1 of the agitators would be further within the design skill of one of ordinary skill in the art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Wayne Langel whose telephone number is 571-272-1353. The examiner can normally be reached on Monday through Friday, 8 am - 3:30 pm Eastern Time.
